

Battery Producer Sees Big Surge In Compliance Efficiency With GAN Integrity

PICTURE THIS...

You're a global leader in energy storage solutions and your batteries power one out of every three vehicles worldwide. Your commitment to sustainability runs through everything you do – from making the transition to electric transportation easier, to recycling nearly 8,000 batteries every hour, to funding charitable work through your foundation.

BUT...

Managing risk across 16,000 employees in 50 different facilities is a draining task. It's hard enough to get plant workers to fill out forms when they don't even have access to a computer – and then you end up handling handwritten reports and digging for data in siloed spreadsheets. It's a cumbersome process that's as outdated as it is unreliable.

SO...

You turn to GAN Integrity. We configure a user-friendly solution that makes it easy for every employee to participate in your programs. We simplify forms so no one ever has to click through irrelevant questions, make them easy to access on a phone, and even integrate with Workday to pre-fill relevant information like supervisor names. And, we bring all of your data into one place, so that you can instantly see the bigger picture and finally get ahead of risk.

NOW

Your compliance program is supercharged. With all the extra manual work out of the way, you're able to connect the dots between multiple compliance programs, look for trends and previously invisible warning signs, and take a more strategic approach to supporting a safe and ethical workplace. Today, the good work you do is finally getting the better support and resources it deserves.
