Open Source Innovator On Cloud 9 With Faster Onboarding From GAN Integrity

PICTURE THIS...

You're leading the way in enterprise open source solutions, driving innovation with a vibrant community of developers. Your secure and reliable IT infrastructure supports scalable growth, and your expertise in the cloud simplifies the adoption of open hybrid cloud solutions. Through global collaboration, you connect a worldwide network of developers and partners, fostering an ecosystem of innovation and excellence.

BUT...

With this vast network of developers and partners comes complexity. Onboarding and vetting partners takes too long, frustrating your channel team. Manual processes, disconnected from your Salesforce instance, create inefficiencies and silos, isolating your program from your parent company since you can't embed their internal risk assessments. Additionally, you lack the staff to review results and struggle with effective reporting, creating further headaches.

SO...

You turn to GAN Integrity for help. We deliver a third-party risk management solution with the end-to-end CRM integration you need. Plus, it comes with advanced automation and workflows to boost your efficiency. You can seamlessly embed your parent company's internal risk assessments into your processes, ensuring a comprehensive view of risks and better alignment. Our robust reporting capabilities eliminate resource bottlenecks, making your compliance program more effective and streamlined.

NOW

You have full visibility into all the processes and data you need, making it easy to spot opportunities and adapt your program as needed. Now you are aligned with your parent company's third-party risk management expectations, rather than out of step with them. With the extra manual work eliminated, you can now focus on what you do best—driving innovation and fostering collaboration. Now that's better.
