

Third Party Risk Management

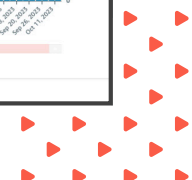

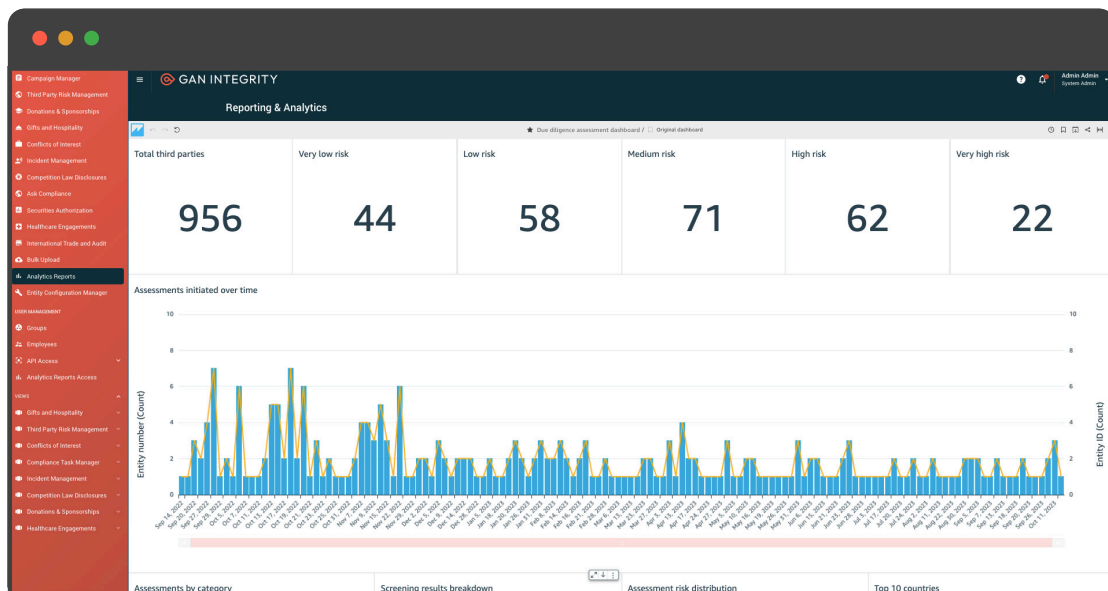

The Integrity Platform's Third Party Risk Management application enables you to track the lifecycle of third-party relationships across different risk types from initial due diligence to real time monitoring on one platform.

Solution Benefits

Establishing full lifecycle management of third-party relationships is critical to a successful TPRM program. The Integrity Platform's Third Party Risk Management application achieves just that and more by empowering your business through:

- **One Integrated Platform:** Centralized visibility over all third party relationships by syncing up your program with your enterprise platform ecosystem.
- **Tailored Due Diligence Controls:** Repeatable and consistent risk-based procedures for more speed, less human intervention, and reduced operational friction.
- **Role-Based Access Control:** Instant visibility for every stakeholder with custom role based access controls to ensure the right people can evaluate risk and take action based on relevant data.
- **Engagement and Adoption:** Easy access, usability and automation empowering stakeholders to effectively manage risk specific to their remit.
- **Reporting and Monitoring:** Report and analyze third-party relationship data across the platform and stay on top of any changes with real-time monitoring.

Tailor your program with flexible no-code technology

Unify your organization's third-party universe and create a single point of entry to deploy a consistent due diligence approach, reduce duplicates and eradicate unmanaged risk.

Tailored user journeys

Create a familiar and intuitive experience using branded, dynamic landing pages and data collection forms based on users' roles and attributes.

Concurrent workstreams

Engage stakeholder in concurrent work streams using parallel workflow technology and allow every stakeholder to assess risk relevant to their remit through tailored risk assessment flows.

Dynamic monitoring and revetting

Allow real-time data to trigger monitoring alerts and event-based revetting by conditioning notifications and actions in the workflow to dynamically escalate and act on changes in risk profiles.

Enrich data through integrations

Connect the Integrity Platform to your enterprise data ecosystem and risk data sources to gain complete visibility into your third party population.

Aggregate risk view

Advanced risk formulas will aggregate risk scores across risk domains to create a snapshot of every third party's risk level for speedier and more streamlined due diligence.

Distilled insights

Configure dashboards to analyze and report on any data point across the platform to identify trends and opportunities. Share data and schedule reports to share insights with stakeholders.

Schedule a meeting to see how you can customize your [third party risk management program!](#)
